

COVID-19 TRACKER

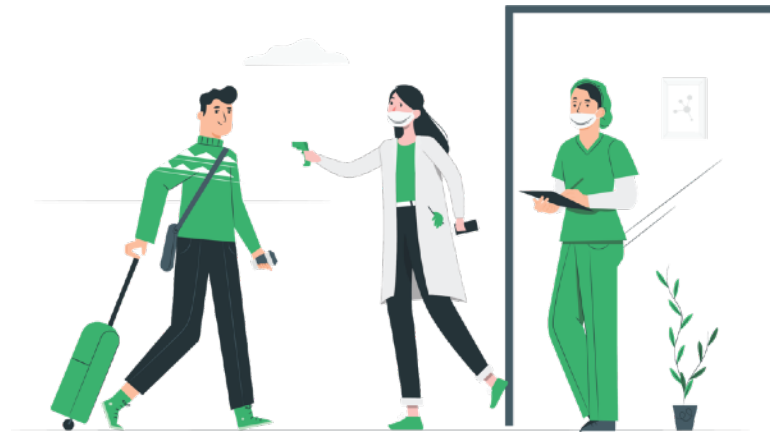

Application Pitch deck

CURRENT SCENARIO

Rajesh is delighted to be heading home after travelling from foreign.

After Rajesh's screening test at airport. He was told be isolated for 14 days at home.

Without knowing the seriousness Rajesh left to buy grocery for his home.

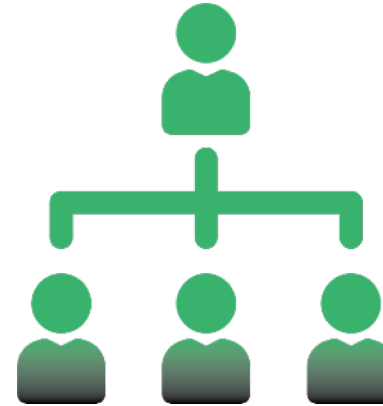

PROBLEM WE FACE RIGHT NOW

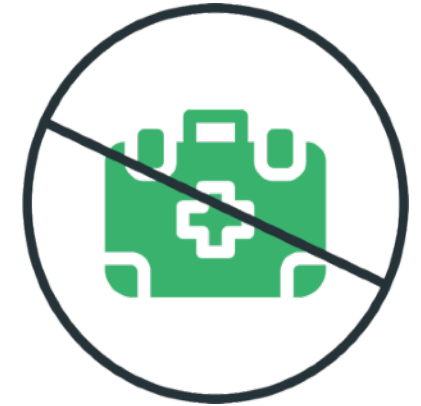

Not able to track the people who has to be isolated / quarantined

Quarantined people are not staying in their zone.

COVID-19 is spreading faster day by day like a chain.

Not able to assist all the COVID-19 affected people and prevent them from affecting others.

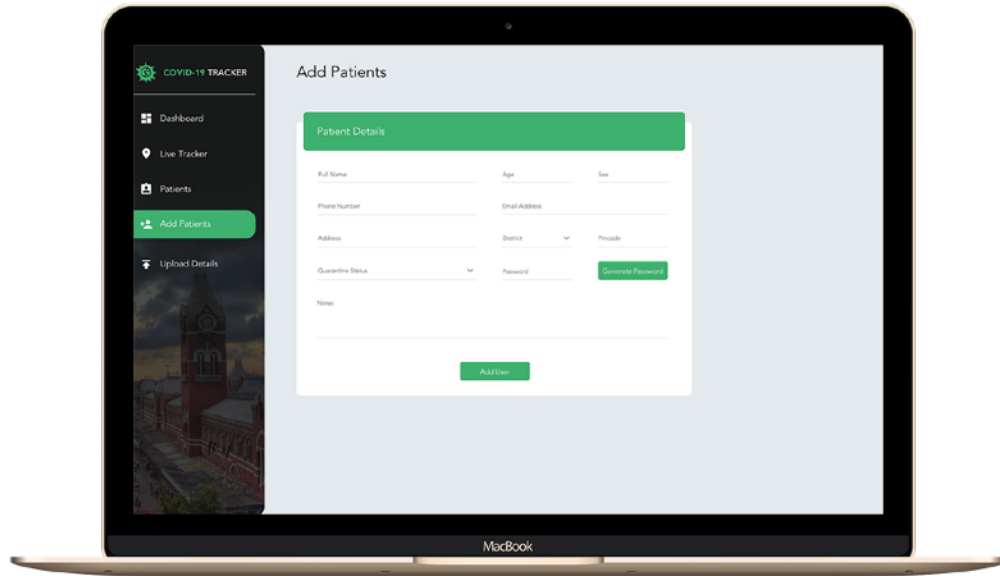

SOLUTION WE PROVIDE

Provide an application that would help the government authorities and relevant departments to maintain a tab on the suspected cases and the quarantined patients as well.

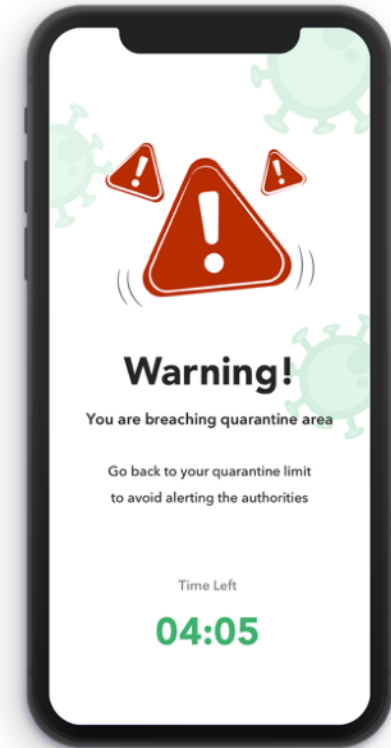

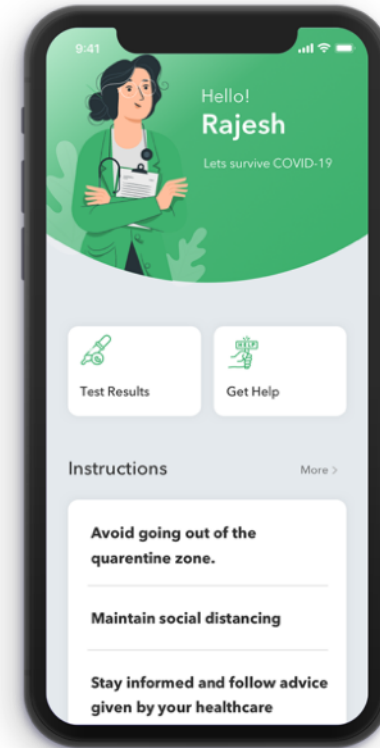

HOW WE DO THIS

Through a platform for authorities to add relevant information of the patients to be quarantine/isolated.

This then provides an easy to use personal app for patients available on their smartphones

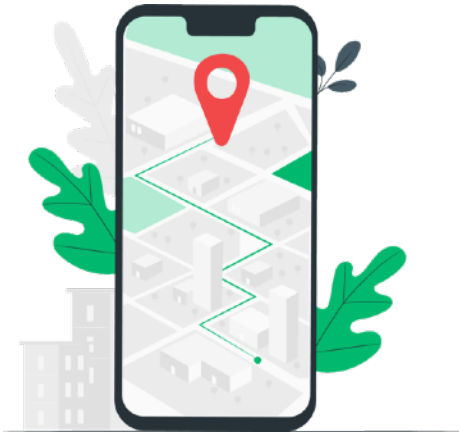

1. One-click emergency button which will connect them to the concerned department.
2. To alert the patients themselves to move back

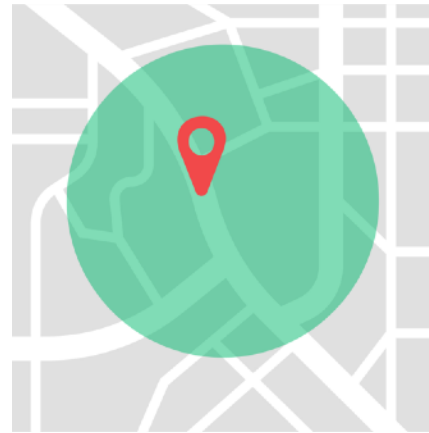

HOW WE DO THIS

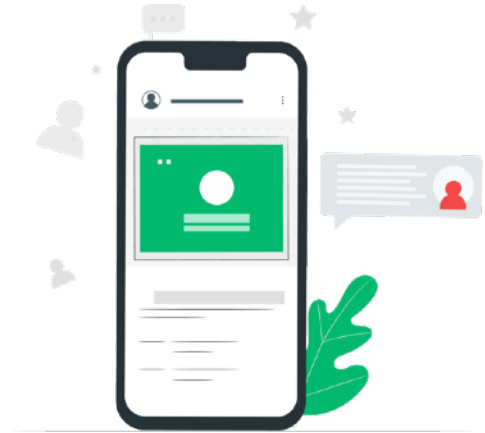

Through web platform, authorities can also monitor, assist and send notifications to patients.

Can track the affected people movements with the help of GPS.

Virtual fence around the patient to alert the authorities.

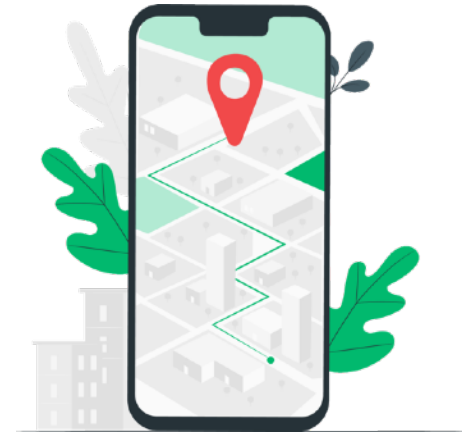

Send notifications to follow precise instructions.

ADVANTAGE OF THIS APPLICATION

The government should request people to install the COVID-19 Tracker app. This helps the authorities to monitor the situation better. Here are the benefits that are entitled to the app.

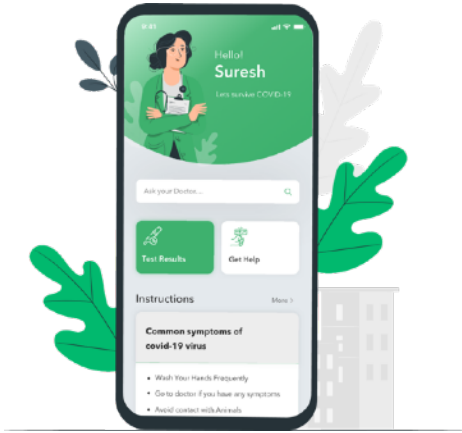

1. Track the travel history:

Once a person is diagnosed with the virus, the COVID-19 Tracker allows the government to closely track his/her travel history. Since the virus symptoms only shows up after 5 days. Having this app installed in the affected person's mobile phone from day one helps the government track his/her entire travel history. The app can clearly trace landmarks like retail shops, ATM, offices the diagnosed person has visited. For example, in case the person is tested positive with Coronavirus, the app helps to track everyone the person has contacted within the last few days.

ADVANTAGE OF THIS APPLICATION

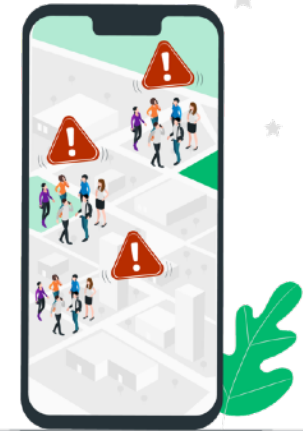

2. Alert the authority about symptoms:

People who see symptoms like fever, tiredness, and dry cough can quickly reach out for help through the app. Officials and the assigned authority will be given the person's location.

3. Track the people who were in contact with the affected person:

As everyone would have the app installed, it will be easy for the government to quickly find out the list of people the diagnosed person has come in contact. This helps the government to take prior precautions and prevent more people from getting affected.

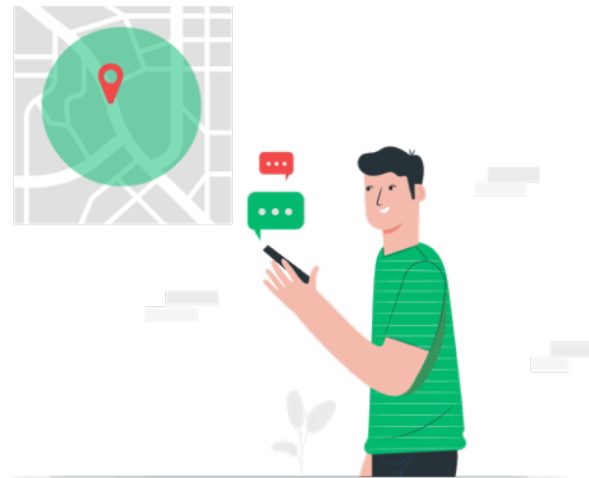

4. Alert social gatherings:

The authorities will be immediately alerted if a group of people have gathered together.

ADVANTAGE OF THIS APPLICATION

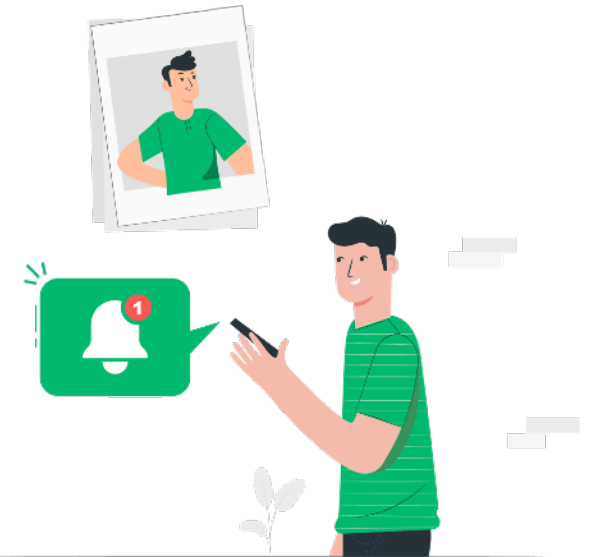

We have developed all the features listed above, in our application (COVID-19 Tracker)

We believe this app can help prevent the spread of the virus and assist people with necessary alerts and precautions. If we can get an opportunity to meet the concerned official, we would love to show how the app can bring change and current situation better.

5. Alert people when an affected person is around:

The app also alerts other people if an affected/quarantined person is close by. For example, you'll get a notification saying there is a quarantined person about 200 meters from your location. Please be safe. Request help instantly.

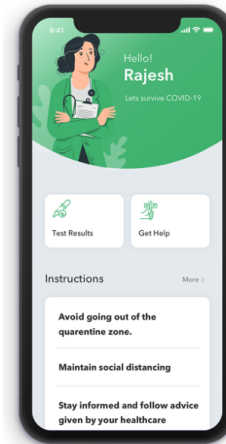

6. Sending random alert to check on quarantine people.

We also alert the quarantined people to click a picture and send to make sure they didn't leave their phone in their house and go outside.

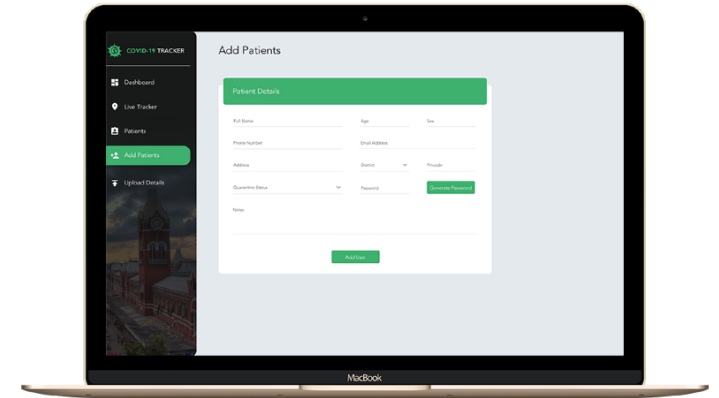

HOW IT WORKS

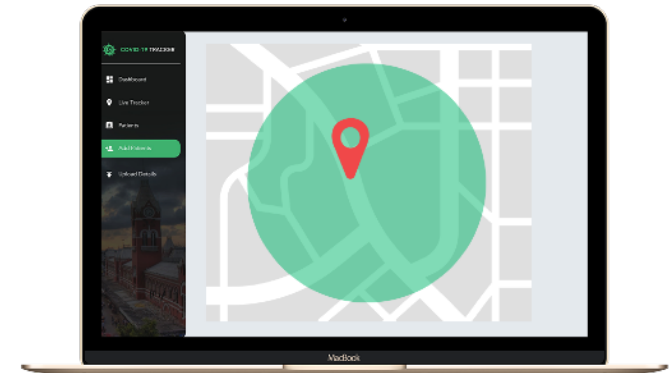

In Corona Tracker web app, authorities will add relevant information of the patients to be quarantined/isolated

Once patient install the mobile app, authorities can track them using GPS from their phone.

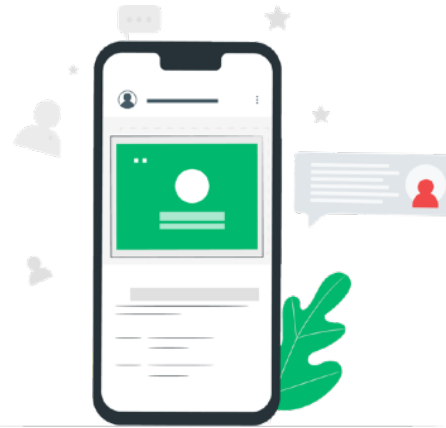

People who asked to quarantine will be provided with an mobile app through text message

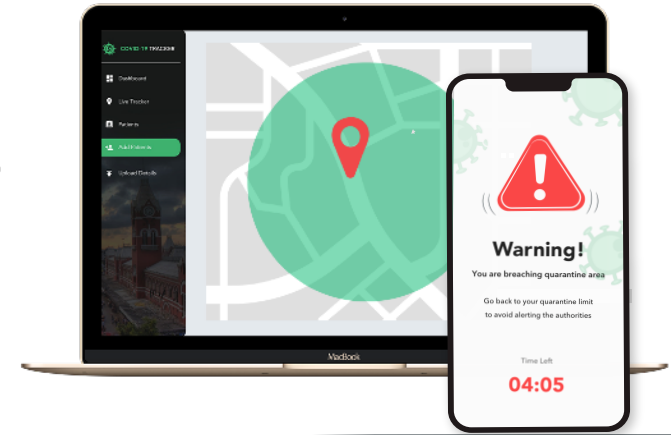

HOW IT WORKS

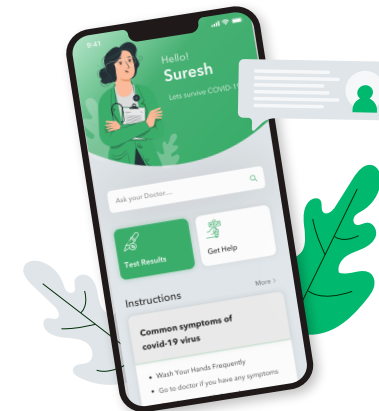

Authorities will have a virtual zone around them if they cross that zone we will get alerts and their live location to track.

If an affected person faces an issue, he/she can alert you seeking for help.

Authorities can send notifications to the affected people to follow precise instructions.

BENEFITS OF THIS APPLICATION

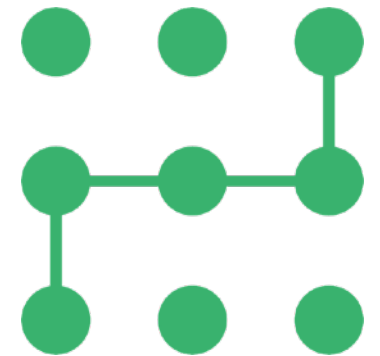

Our app helps to stop the virus spreading as community.

It reduces manpower for certain stage to monitor each quarantined person.

Application helps to take immediate action on affected people.

Viral spreading pattern can be identified through location data.

A person in blue scrubs is pushing a gurney in a hospital hallway. The scene is dimly lit, with the person and gurney in the center. The text 'Thank you' is overlaid in white, with a green horizontal line underneath it.

Thank you
